Since 1876

Loop Launch

- Type: X-Car Launch Coaster
- Number of cars: 2 x 6-seater X-Car, coupled to 1 tandem
- Capacity: 550 pph
- Max. speed: 76 km/h (47 mph)
- G-forces: min = -0,5 g; max = +4,5 g
- Airtime: 2 x 1 s per loop
- Multimedia-ready
- State-of-the-art LSM Launch

The compact LoopLaunch is a spectacular crowd-pleaser perfect for the entire family. Passengers experience the launch effect right after leaving the station: The X-Car tandem is literally shot into the non-inverted loop – old and young can enjoy the ride without being in an overhead position. With each round, the LoopLaunch provides around one second of airtime twice – a duration otherwise only reached with two big camelbacks. Typically, the loop is run three times and an “on-the-fly” thrust acceler-

ates the X-Car tandem each time it passes through the station. As fun like this begs for repetition, the operator can add one or two additional rounds at the push of a button. For passengers, this means the suspense of wondering if there will be a bonus round builds up right to the very end.

To sum up, the LoopLaunch is an impressive eye-catcher featuring an LSM launch and ample airtime, requiring a very small base area of 10 x 50 m (33 x 98 ft).
