Over the last thirty years, Intamin has developed the most comprehensive range of roller coasters of any manufacturer in the world. The experience of designing such a variety of different coasters has made it possible to develop a new type of coaster to control acceleration and low g-force. Recent development in the design of roller coasters has enabled Intamin to use the latest vehicle design and technology to provide a state of the art ride vehicle. This particular coaster is designed as a jet ski to reinforce the excitement of the jet ski shows.
By keeping the ride low to the ground with twists and turns which are banked first one way and then the other, we are able to recreate the effect of a fast jet ski racer and by designing the ride so that the onlookers can be part of the thrilling experience will enhance and increase the ride's entertainment value.
