The sleek train exits the station and is suddenly accelerated, reaching maximum velocity in less than two seconds. Riders experience a one G force that pushes them into the back of their seats. Immediately the train shoots up vertically entering into a 4G TOP HAT element where the guests are inverted before they race down the second half of the TOP HAT. The train again reaches maximum velocity, executes a 180 degree turn to the right and then shoots up a tower where riders find themselves looking straight up at the sky while experiencing a near zero G sensation. The train stops just before the track ends and then riders are accelerated through the entire course of track returning to the station—backwards! Only when the train comes to a stop in the station do the riders get to catch their breath and share the excitement of their adventure.
